
Sri Lanka

ABSTRACT

The Global Competitiveness Report, published by the World Economic Forum, has described Sri Lanka's economy as transitioning from the factor-driven stage to the efficiency-driven stage. According to the World Bank, strong economic growth in the last decade has led to improved shared prosperity and an important decline in poverty.

As for the Sri Lanka's microfinance sector, it shows good potential for growth as 70% of the population is considered unbanked.

The study provides a detailed overview of the inclusive finance sector, contextualized in the political and socio-economic environment of the country. It is available for investors, donors and other participants of the sector who need to:

- evaluate new markets where to develop their activities;
- monitor the existing exposure in the country and deepen the knowledge of a market by spotting challenges and opportunities;
- identify FIs with a great potential for financing and technical support.
